Projects

- **Spotify Clone**
 - The Spotify Website Clone project aims to replicate the design and layout of the Spotify music streaming website using HTML and CSS. The project focuses on creating a visually appealing and responsive design that mimics the original Spotify website.
- **Calculator**
 - The Calculator project is a simple and functional calculator that allows users to perform basic arithmetic operations. The project uses HTML for structure, CSS for styling, and JavaScript for functionality.
- **Contact Management System**
 - The Contact Management System is a simple application that allows users to store, manage, and retrieve contact information. The project uses Python as the programming language and provides a user-friendly interface to interact with the contact database.
- **Word Meaning Dictionary**
 - The Word Meaning Dictionary is a web-based application that allows users to search for word meanings, synonyms, antonyms, and examples. The project uses Streamlit as the framework and Python as the programming language.
